Tracheocoele - a complication after decannulation

*Hanna Mackiewicz-Nartowicz, Magdalena Mackiewicz-Milewska, Robert Bilewicz, Katarzyna Laskowska*

## **Summary**

A case of tracheocoele as a complication after decannulation in a patient after brain trauma is presented. Within twelve months after decannulation patient was operated three times to close the tracheocutaneous fistula without good effect. A pretracheal air cyst was recognized after the radiological examinations. Tracheocoele was evacuated with its tract. No recurrences were observed.
