

Rzadki przypadek szpiczaka pozaszpikowego okolicy policzka

A rare case of extramedullary plasmocytoma of the cheek

Maciej Pabiszczak, Małgorzata Wierzbicka, Aldona Woźniak, Jakub Żurawski, Witold Szyfter

Summary

It has been presented a rare case of extramedullary plasmocytoma in a 69-years old woman. The tumor has arised in soft tissues of the right cheek. Extramedullary plasmocytoma is a rare tumor which belongs to non-Hodgkin's lymphomas. The characteristic feature of that group is monoclonal proliferation of B lymphocytes. One of the most common locations is nasopharynx and paranasal sinuses.
