

# **Zastosowanie aerozoloterapii w leczeniu schorzeń otolaryngologicznych**

Usefulness of aerosolotherapy in treatment of otolaryngological diseases

**Joanna Łączkowska-Przybylska, Zygmunt Szmeja**

Aerosolotherapy is a particularly useful method of treatment for otolaryngologists because it is a procedure of local treatment within the affected region. Advantages of aerosolotherapy as well as indications and contraindications for aerosolotherapy in patients with otolaryngological diseases are described. Among the indications are: precancerous states located on vocal cords; pooperative states in the region of nose, throat and larynx; states after radiotherapy; mycosis of oral cavity, throat and larynx; The importance of additional techniques of aerosolotherapy such as: vibratory aerosols, additional hypertension and electroaerosols is emphasized.
