

Obustronny guz szyi jako manifestacja nerwiakowłókniakowości typu I (NF I)

Bilateral neck tumor as the clinical manifestation of neurofibromatosis type I (NF I)

Arkadiusz Paprocki, Barbara Biskup, Antoni Bruzgielewicz, Kazimierz Niemczyk

Summary

A case of the 17-years old girl with bilateral tumors of the neck due to neurofibromatosis type I has been described. Patient has been unsuccessfully treated conservatively for over two years prior to the admission to our Department. The principles of diagnostics and surgical treatment of the patients with neurofibromatosis type I have been presented.
