

Haemangiopericytoma ślinianki przyusznej

Haemangiopericytoma of the parotid gland

Antoni Osmólski, Joanna Forlot, Marta Bukrewicz

Summary

Haemangiopericytoma is a vascular, soft tissue neoplasm with rare occurrence in the head and neck region. On the basis of literature we discuss etiology, symptomatology, histopathology, diagnosis, treatment and prognosis. We present the case of 66-old woman with haemangiopericytoma in the parotid gland treated by surgery.
