

Guz krtani o utkaniu *osteoblastoma agresiva*: opis przypadku

Aggressive *osteoblastoma* of the larynx: case report

Hubert Urbańczyk, Leszek Miszczyk

Summary

Osteoblastoma agresiva is not often bone tumor, only locally malignant. There are not articles, describing extra skele-ton localization. Authors presented case of 45 year old patient, who was treated because of Aggressive Osteoblastoma localized in larynx. Patient has received operation and irradiation treatment. The tumor localization and patients age -more than 35 year are unusual.
