

Przypadek równoczesnego występowania guzów onkocytnych ślinianek podżuchwowych z onkocytozą nerek

A case of bilateral oncocytomas of the submandibular gland and synchronous renal oncocytomas

Marzena Kubacka, Lucyna Pośpiech, Marzena Jaworska, Alicja Markowska-Woyciechowska

Summary

A case of 42 years-old man with bilateral big sized (12x5 cm and 10x4,5 cm) oncocytoma in submandibular glands was presented. Oncocytoma is a rare benign neoplasm observed in numerous of organs. In the case described besides submandibular glands tumours, accessory oncocytic tumours in both kidneys were diagnosed. It was the reason of earlier unilateral nephrectomy. Surgical treatment was applied. The comparison of the both tumours histology allowed to establish proper diagnosis. The case is presented because of the explicitly of the oncocytoma location especially in the both submandibular glands simultaneously with tumour of the same histology in distant organs.
