

Testy utrudnione w audiometrii mowy dla języka polskiego Część I: przygotowanie materiału testowego

Dychotomic tests in Polish for speech audiometry Part 1: Preparing material for the tests

Waldemar Wojnowski, Andrzej Obrębowski, Antoni Pruszevicz, Grażyna Demenko, Bożena Wiskirska-Woźnica, Teresa Wika, Dariusz Komar

Summary

Introduction: Dychotomic tests in speech audiometry are extremely beneficial, especially in diagnosing central auditory processing disorders. **Materials and methods:** Basing on new articulatory lists (NLA-93), the authors have prepared a new set of language tests, including filtered speech test, numeral and verbal dichotic tests and Calero test. **Conclusions:** The phonetic characteristics of the tests are presented, with special attention paid to their phonetic balance.
