

Leki przeciwhistaminowe w alergicznych nieżytach nosa

Antihistamines in allergic rhinitis

Jerzy Kruszewski

Summary

Antihistamines are the first line of pharmacotherapy in allergic diseases, especially in allergic rhinitis. The article also presents the interesting 2005-2007 publications on the use of antihistamine in practical point of view, especially the newly introduced ones (desloratadine, fexofenadine, levocetirizine) and those which are to be introduced soon (rupatadine). The efficacy in skin histamine provocation model and various clinical model were discussed.
